The Trucks

The Scottish haulage industry uses a wide variety of trucks, each designed for a specific purpose. These include:

- **Articulated lorries:** These are the largest and most common type of truck on Scottish roads. They consist of a tractor unit and a separate

trailer, which can be loaded with a variety of goods.

- **Rigid trucks:** These are smaller than articulated lorries and have a fixed body. They are often used for shorter journeys or for transporting smaller loads.
- **Tipper trucks:** These are used for transporting loose materials, such as sand, gravel, and coal. They have a hydraulically operated body that can be tipped to unload the load.
- **Tankers:** These are used for transporting liquids, such as fuel, oil, and milk. They have a sealed body and are equipped with pumps to load and unload the liquid.
- **Refrigerated trucks:** These are used for transporting perishable goods, such as food and pharmaceuticals. They have a refrigerated body that maintains a constant temperature.

The Drivers

The drivers of Scottish trucks are a dedicated and skilled group of people. They work long hours in all weathers, often facing challenging road conditions. They are responsible for the safe and efficient delivery of goods, and they play a vital role in the nation's economy.

The haulage industry is facing a shortage of drivers, and this is a major concern for businesses and the economy. To address this issue, the industry is working to attract and retain new drivers, and to improve the working conditions for existing drivers.
